

Emojis in Terminal Command Prompt

By: Megan Avery
Updated July 2018

Assumption

You already have a `.bash_profile` or `.bashrc` file set up with a `PS1` line (terminal command prompt)

Steps on Mac

- Open `.bash_profile` in text editor
 - This tutorial opens it in vim
- Go to PS1 line and put cursor where you want to insert the emoji
- Hit **[command] + [control] + [space]** to open emoji picker
- Select emoji that you want use to insert it
- Save file
- Go back to command line and run **source .bash_profile** to see emoji in command prompt

Steps on Linux

- Open `.bashrc` in text editor
- Go to <https://getemoji.com> and copy an emoji
- Go to PS1 line and paste emoji where you want to use it
- Save file
- Go back to command line and run **source .bashrc** to see emoji in command prompt

The End
